

BGA Rework Station

We have a complete BGA rework range from entry level to high end machines. All BGA rework stations can have side-view camera for your special inspection needs & a semi-automated rework station is available with optical alignment system. Also available is a fully automated rework system with N2 gas capability (Soldering in a N2 atmosphere enable higher quality solder joints when compared to soldering in hot air or IR sources) and this has been widely used in EMS manufacturing facilities in their volume rework process.
